

# BARBOUTI!

by Sakis Kaffesakis 2020

## Welcome to BARBOUTI!

BARBOUTI is a traditional and popular game in Greece. This game is based on BARBOUTI.

It is a very simple game.

If you use tape, go to tape mode by typing < ltape > (the first letter l can be typed using shift and the key just right of the letter p).

Type < run"BARBOUTI.bas" >

(< " > can be typed by pressing shift+2)

At the beginning, one player holds the dice. The other decides the bet. The player who holds the dice throws them. There are 3 possibilities depending on the numbers on the dice.

WINNING COMBINATIONS: 6 6, 5 5 , 6 5 (OR 5 6 ), 3 3.

LOSE COMBINATIONS: 1 1, 2 2 , 1 2 (OR 2 1), 4 4.

The sequence (eg if it is 6 5 or 5 6) plays no role.

If there is no WIN combination or LOSE combination, next player takes and throws the dice. In this game, bet cannot be changed until a player wins or loses.

Statistically speaking, there is no difference if a player holds the dice or not (only psychological). You have the same chances to win, either by throwing the dice and get a WIN combination, or when opponent player throws the dice and gets LOSE combination. There is no change.

In this game we added 2 extra features: Capitalist Bank and Sell Watch. You can go there only when you have the dice (and after other player decides the bet if needed) by pressing B and S.

If you accept loan from Capitalist bank, you will get 2500-5000 depending on luck.

If you sell your watch, you will get 1500-3000 depending on luck.

These choices affect the <end of the story>, that you will see for each player at the end of the game (or only for you, if its 1 player mode).

## Have fun! Hope you enjoy!

Runs better in Winape emulator (Winape 2.0 beta 2)

Hope you enjoy! Many thx for your interest!
